

The GROTTO SPA... Nature by Design

How do we move the 12,000 lb GROTTO SPA from here at the Vancouver Home and Garden Show...

To here... the proud new owner's back yard?

Upon closer inspection you can see this spa is modular

We strip the forms, revealing the plumbing and foam insulated base support

Our trucking company arrives to get us moving!

Then we attach a series of evenly balanced chains, for the crane to lift the heavy “cave” off of the base...

... and onto the flat-bed deck

The same is done to the base and both are strapped down

At the other end, the home-owner watches as the crane sets up

From 150 feet away, the base is hoisted up ...

Over the house ...

And into the excavated hole in the back yard

The same is then done with the “cave”...

...and this one takes some finesse to place

Once in place, connections are made and backfilling occurs

And once landscaping is finished, you'd think it was rock

Contact us below to discuss having your very own custom grotto spa shipped to you:
